## **100 - ELECTRIC SERVICE AVAILABILITY**

### **101 - APPLICATION FOR MEMBERSHIP**

Any person, firm, association, corporation, or body politic or subdivision thereof desiring electric service shall sign a written application for membership and pay a membership fee (See Appendix A) together with a service security deposit (See Appendix A). If already a member and desiring an additional service connection, a written application for service shall be signed and a service security deposit shall be paid if required by the Cooperative. In this application, the consumer shall agree to purchase from the Cooperative all electric energy purchased for use on the premises and to be bound by the Cooperative's Certificate of Incorporation and Bylaws and all Rules and Regulations and Rate Schedules established pursuant thereto. Upon termination of membership, membership fee will be refunded or applied against unpaid balance owed the Cooperative.

### **102 - SERVICE SECURITY DEPOSITS**

A service security deposit (See Appendix A) shall be collected in advance of connecting any service with respect to which the Cooperative determines that such deposit is needed to assure payment of the power bill.

A deposit shall be refunded, without interest as provided for in a written contract for service or upon such other conditions as may be established by the Cooperative with respect to service risks of similar character. In any event, the deposit shall be refunded, without interest, upon termination of the service, less any amounts the consumer may then owe the Cooperative.

### **103 - EXTENSION POLICY - OVERHEAD SERVICE**

Applications for overhead electric service will be classified into one of the following defined classifications and service will be extended accordingly:

#### Permanent Establishments:

This classification includes permanent domiciles, schools, public buildings, churches, commercial and industrial establishments or any other establishment of a permanent nature requiring electric service on a continuous basis. Domicile means the place where a person has his/her true, fixed and permanent home and principal establishment, to which he/she has whenever he/she is absent, an intention of returning. It is the place where a person votes in that resident precinct, receives his/her mail, spends an average of at least four (4) nights per week, has his/her true, fixed and permanent home and principal establishment. A person can have only one domicile but can have more than one residence. Single-phase electric service facilities will be extended up to 1,500 ft. at no charge to establishments of this classification within the service area of the Cooperative upon request by the owner or occupant. Extensions extending more than 1,500 ft. will require a contribution in aid of construction equal to estimated actual cost unless economically feasible based on the cooperative's line extension worksheet.

Three-phase service shall be extended up to 1,500 ft. to such establishments without any contribution in aid of construction. Three-phase service requiring the construction of lines beyond 1,500 ft. may require a contribution in aid of construction equal to estimated actual cost unless economically feasible based on the cooperative's line extension worksheet. Applicants for three-phase service may be required to execute a written contract in advance of extending such service.

### Construction Service:

Temporary service for construction of buildings or other establishments which will receive permanent electric service from the Cooperative upon completion will be extended service under the same conditions as a permanent establishment as specified above.

### Other Temporary Service:

Service will be extended to other temporary establishments upon receipt in advance of a contribution in aid of construction equal to twice the estimated labor and other costs in constructing the line, plus the cost of any unsalvageable material.

### Irrigation:

Three fourths (75%) of the costs of line construction, relocation and/or rephasing (including conductors, poles, transformers, metering equipment, etc.) required to serve the member's irrigation account shall be provided by the member as a one-time, non-refundable contribution in aid of construction, such contribution to be paid before construction begins. Line construction and/or upgrading which is included in the current two-year construction work plan, and all protective equipment (reclosers, line fuses, and lightning arresters) will be provided at the expense of the Cooperative.

It is the policy and objective of the Cooperative to extend service and/or increase service capacity to all consumers consistent with sound management and engineering practices.

In making line extensions and/or conversions of existing lines to serve new and/or existing consumers, our policy and charges shall be determined by the class of consumer. These are described as follows:

### Permanent Type Consumers:

Normally these are farm, home, small commercial consumers and mobile homes on permanent foundations as specified in Service Rules and Regulations No. 103, I-A. For single-phase consumers, the minimum bill in the applicable rate schedules shall apply in accordance with our area coverage policy.

Three-phase service shall be extended up to 1,500 ft. to such establishments without any contribution in aid of construction or facilities extension deposit when such establishments are located near the Cooperative's existing three-phase facilities. Three-phase service requiring the construction of lines beyond 1,500 ft. may require a contribution in aid of construction unless economically feasible based on the cooperative's line extension worksheet. Applicants for three-phase service may be required to execute a written contract in advance of extending such service.

### Indeterminate Type Consumers:

These are the consumers which are expected to take service for two years or more, but it is not possible to accurately determine the length of time the consumer will take service in the location. These consumers are generally large power, mobile homes, water pumps, seasonal consumers, etc. The minimum bill per month shall be determined in accordance with good utility practices taking into account investment, length of contract,

etc. and, in addition, a contribution in aid of construction may be required in special cases. On this type consumer, aid to construction is required on a single-phase line over six hundred feet (600'). Extensions extending more than 600 ft. will require a contribution in aid of construction unless economically feasible based on the cooperative's line extension worksheet.

#### Temporary Type Consumers:

These are consumers which are expected to take service at one location for 24 months or less, these are usually contractors, carnivals, fairs, etc. Temporary service, such as service to construction jobs, fairs, and carnivals, shall be supplied in accordance with the foregoing rates, except that the consumer shall pay in addition to the foregoing charges the total cost of connecting and disconnecting service less the value of materials returned to stock. A deposit, in advance, may be required of the full amount of the estimated bill for service, including the cost of connection and disconnection.

#### Ownership and Refunds/Credits:

The cooperative will retain ownership of all facilities built which may fall under this policy.

At the members request refunds or credits may be made based on the location of the new load on the line extension and the type of load added. Amounts will be based on the average per foot cost estimated at time of construction.

Accounts that are under contract will have the remainder of the contract adjusted to show the adjusted amount. At no time will the amount refunded be more than original amount contracted for or paid. Accounts will not be eligible for a refund or credit after five (5) years beyond the date that the line was extended.

#### Right to Waive:

The cooperative may waive any or all parts of this policy if, in its opinion, it is financially in the best interest of the cooperative to extend its facilities.

The cooperative may also waive any or all parts of this policy if it deems it necessary to extend or change facilities due to a risk to public safety.

Agreements for line extensions signed prior to the effective date hereof shall continue to be governed under the provisions of those existing agreements.

### **104 - EXTENSION POLICY - UNDERGROUND SERVICE**

The Cooperative will extend underground service, upon request, to its consumers under the following conditions:

#### Residential Service:

#### Service to New Developments:

The developer is responsible for the charges for extending primary to the buildable portion of every lot within

the subdivision. Each construction phase of a development will be evaluated separately. Subdivisions will be assessed a \$2,000 per lot charge as aid-to-construction. This fee is non-refundable and will be reevaluated yearly to adjust for increases in material and labor costs between standard overhead and underground service.

The owner or developer will furnish, without cost to the Cooperative, necessary easements and rights-of-way and may be required to initially cut and clear the same. The owner or developer will be required to have the rights-of-way and all streets, alleys, sidewalks and driveway entrances graded to final grade, and will have lot lines established before construction of the electrical distribution system begins.

The type of construction and the location of said facilities will be at the option of the Cooperative. Should the owner or developer desire changes in either location or type of construction, such installations will be made when the owner or developer agrees to pay to the Cooperative the estimated additional cost incurred thereby.

The Cooperative shall have the option of placing transformers above ground, on pads of its specification and/or design, or underground, and in enclosures of its specification and/or design, as the Cooperative in its sole discretion may determine to be practicable.

Shrubs, trees, and grass sod requiring protection during the installation of the underground service will be the responsibility of the owner or developer, and the owner or developer will hold the Cooperative and/or its subcontractors harmless against any claims for such damage. It will be the responsibility of the owner or developer to reseed and/or maintain the trench cover.

The owner or developer may be required to pay all costs incurred in cutting through and replacing pavement within the development.

The owner or developer shall sign a Hold Harmless Agreement, which is a legally constituted document. This agreement places the burden for any unforeseen damage which may occur (Example: cutting water lines, drain lines, gas lines or other electrical lines, etc.) upon the property owner or developer and any said repairs will be looked after and paid for by the owner. This agreement will be completed and signed before equipment is moved in and work is begun.

In all cases the homeowner, electrician, contractor, or developer will verify with a duly authorized Cooperative representative the proper location of the meter socket or base upon the building to be wired or built. Bases not located by such authorized person may be required to be relocated at the homeowner's or electrician's expense.

#### Residential Areas with Existing Overhead Primary:

At the request of an owner or developer, the Cooperative will furnish and install underground services, (service drops) in areas already being served with existing overhead primary service, upon the following terms and conditions:

New -- The Cooperative shall install all service drops with a 2½" PVC conduit pipe for 200 AMP service, or a 3" PVC conduit pipe for 300 AMP or larger service to be furnished by the owner or developer. The owner or developer will be required to pay a non-refundable charge for all material and at the current Cooperative purchased price that is necessary to install the underground service drop. This charge basically reflects the difference in cost between overhead and underground service.

In all cases, the homeowner, electrician, contractor, or developer will verify with a duly authorized Cooperative

representative the proper location of the meter socket or base upon the building to be wired or built. Bases not located by such authorized person may be required to be relocated at homeowner's or electrician's expense.

The owner or developer may be responsible for the cost of cutting through and replacing pavement within the development.

The type of construction and the location of said facilities will be at the option of the Cooperative. Should the owner or developer desire changes in either location or type of construction, such installations will be made only upon the owner or developer agreeing to pay to the Cooperative the estimated additional cost incurred thereby.

Shrubs, trees, and grass sod requiring protection during the installation of the underground service will be the responsibility of the owner or developer, and the owner or developer will hold the Cooperative and/or its subcontractors harmless against any claims for such damage. It will be the responsibility of the owner or developer to reseed and/or maintain the trench cover.

The owner or developer shall sign a Hold Harmless Agreement, which is a legally constituted document. This agreement places the burden for any unforeseen damage which may occur (Example: cutting water lines, drain lines, gas lines, or other electrical lines, etc.) upon the property owner or developer and any said repairs will be looked after and paid for by the owner. This agreement will be completed and signed before equipment is moved in and work is begun.

#### Conversion of Service Drops:

Existing overhead secondary distribution facilities may be installed underground upon receipt of a non-refundable payment equal to:

The cost to remove the existing facilities; plus the estimated full cost to install the new facilities; less the estimated salvage value of any of the materials being removed.

The homeowner will be required to sign a Hold Harmless Agreement as these units of work usually result in damage to underground lines already existing on the premises due to time of location and inaccurate knowledge of location by homeowner.

Any expense incurred in relocating the applicant's service entrance facilities to accommodate the underground service drop shall be borne by the applicant.

#### Mobile Home Parks:

Upon request from an owner or developer, the Cooperative will provide underground service to mobile home parks as hereinafter set forth:

A mobile home park must have a S. C. Health Department approved plan for water system and sewer system and the spaces under the Cooperative's procedure cannot be less than a layout of 10 home sites.

The park owner will be responsible to furnish the Cooperative with a plat and also an overall development plan of the entire park project.

The Cooperative will furnish and install from an overhead point, going underground where necessary to enhance the overall development and will run said underground secondary wires from underground or overhead transformers (as the case may be) to a point where the pedestal will be located. The park owner will be responsible for paying an electrician to install and tie the pedestals into the Cooperative's secondary cable.

Prior to purchasing the electrical pedestals, the park owner will allow the Cooperative to approve the pedestals, as restrictions change from time to time. No pedestal will be connected that does not meet minimum requirements of the Cooperative.

At the request of the park owner, the Cooperative will furnish a street lighting layout to be installed at the time the secondary is installed. If this plan is not incorporated, the park owner will then have the responsibility of later installing his/her own system.

The type of construction and the location of the said facilities will be at the option of the Cooperative. Should the owner or developer desire changes in the location or type of construction, such installations will be made only upon the owner or developer agreeing to pay to the Cooperative the estimated additional cost incurred by the Cooperative.

The owner or developer shall sign a Hold Harmless Agreement, which is a legally constituted document. This agreement places the burden of any unforeseen damage which may occur (Example: cutting water lines, drain lines, gas lines, or other electrical lines, etc.) upon the property owner or developer and any said repairs will be looked after and paid for by the owner. This agreement will be completed and signed before the equipment is moved in and work begins.

The park owner is responsible for the charges for extending primary to the buildable portion of every lot within the mobile home park. Each construction phase of a mobile home park will be evaluated separately. Subdivisions will be assessed a \$2,000 per lot charge as aid-to-construction. This fee is non-refundable and will be reevaluated yearly to adjust for increases in material and labor costs between standard overhead and underground service.

#### Mobile Home (Individual Ownership):

A mobile homeowner, to acquire an underground service upon his/her premises, shall be required to do the following:

He/she must prove ownership and title to said land where the cable is to be laid.

The owner shall sign a Hold Harmless Agreement, which is a legally binding document. This agreement places the burden for any unforeseen damage which may occur (Example: cutting water lines, drain lines, gas lines, or other electrical lines, etc.) upon the property owner and any said repairs will be looked after and paid for by the owner. This agreement will be completed and signed before the equipment is moved in and work begins.

All mobile homes shall have a 2 1/2" PVC conduit pipe for 200 AMP service, or a 3" PVC conduit pipe for 300 AMP or larger service to be furnished by the owner or developer and installed by the Cooperative. The owner or developer will be required to pay a non-refundable charge for all material

and at the current Cooperative purchase price that is necessary to install the underground service drop. This charge basically reflects the difference in cost between overhead and underground service.

The owner or developer may be responsible for the cost of cutting through and replacing pavement.

The type of construction and the location of the said facilities will be at the option of the Cooperative. Should the owner desire change in either location or type of construction, such installations will be made only upon the owner agreeing to pay to the Cooperative the estimated additional cost incurred thereby.

Shrubs, trees and grass sod requiring protection during the installation of the underground service will be the responsibility of the owner, and the owner will hold the Cooperative and/or its subcontractors harmless against any claims for such damage. It will be the responsibility of the owner to reseed and/or maintain the trench cover.

#### All Electric Mobile Double Wides and Single Units:

These will qualify for underground service, provided all Mobile Home requirements above are met.

#### Commercial and/or Industrial Installations:

Upon request from the consumer, the Cooperative will install underground services to a commercial or an industrial installation upon the consumer agreeing to pay the estimated excess cost of installing underground over the cost of conventional overhead service unless found to be economically feasible using the cooperative's line extension worksheet.

#### Public Buildings:

Underground services will be furnished, upon request and without charge, to new structures, such as schools, churches, community halls, fire stations, and other structures not privately owned but dedicated to public use and benefit. Existing structures within these categories may have their overhead services removed upon request and upon their agreeing to pay the actual cost of removing the overhead service and installing underground service.

#### Underground Primary Line Extensions:

When the Cooperative is requested to bury any lengths of underground primary line, an engineering study will be conducted to determine what the initial cost will be, both overhead and underground, taking into consideration cost figures on length, wire size, trenching conditions, right-of-way and other unforeseen expenses. These figures will be analyzed, and if there is additional expense incurred in placing the line underground as opposed to overhead, then the property owner or homeowner will pay the difference in the two. This fee will be paid prior to work being started (developments and subdivisions excluded).

#### Irrigation Systems:

If a consumer installs an irrigation system on the Cooperative line, he/she will be required to pay the cost of construction as follows:

Any system improvements in the current two-year work plan will be taken into consideration.

Seventy-five percent (75%) of the additional cost (using current pricing information) will be charged after allowing salvage credit for reusable material. This must be paid before construction begins.

In the event the system is disconnected upon request or for nonpayment, the consumer will be required to pay the monthly minimum charge, the same as is paid when not being used before being reconnected. If the system is disconnected permanently, no further charge is to be made.

#### Ownership and Refunds/Credits:

The cooperative will retain ownership of all facilities built which may fall under this policy.

At the members request, refunds or credits may be made based on the location of the new load on the line extension and the type of load added. Amounts will be based on the average per foot cost estimated at the time of construction.

Accounts that are under contract will have the remainder of the contract adjusted to show the adjusted amount. At no time will the amount refunded be more than original amount contracted for or paid. Accounts will not be eligible for a refund or credit after five years (5) beyond the date that the line was extended.

#### Right to Waive:

The cooperative may waive any or all parts of this policy, if, in its opinion, it is financially in the best interest of the cooperative to extend its facilities.

The cooperative may also waive any or all parts of this policy if it deems it necessary to extend or change facilities due to a risk to public safety.

Agreements for line extensions signed prior to the effective date hereof shall continue to be governed under the provisions of those existing agreements.

### **105 – STANDARD SUPPLY VOLTAGES**

One system of alternating current, 60 cycles per second, is supplied throughout the Cooperative's system. The voltage, number of phases, and type of metering which will be supplied depends upon the Cooperative's facilities available and upon the character, size, and location of the load to be served. Therefore, the consumer shall consult the Cooperative before proceeding with the purchase or installation of wiring or equipment. To avoid misunderstanding, this information should be in writing.

The standard secondary voltages described below are nominal and are subject to a plus or minus 6% variation.

Single-Phase, 2 wire, 120 volts  
Single-Phase, 3 wire, 120/240 volts  
Three-Phase, 120/208 volts  
Three-Phase, 120/240 volts

Three-Phase, 240/480 volts

Three-Phase, 277/480 volts

The standard primary voltages described below are nominal and are subject to a plus or minus 7 ½ % variation:

Single-Phase, 2 wire, 7200 volts

Three-Phase, 4 wire, 7200/12,470 volts

It will not be considered a violation when voltages outside of the prescribed limits are caused by any of the following:

Action of the elements

Service interruptions

Temporary separation of parts of the system from the main system

Infrequent fluctuations not exceeding five (5) minutes duration

Other causes beyond the control of the Cooperative

## **106 – SERVICE INTERRUPTIONS**

The Cooperative does not guarantee continuous and uninterrupted electric service and will not be liable for loss or damage to any consumer's equipment caused by failure to supply electricity or by any interruption or reversal of the supply of electricity if due to any cause beyond the reasonable control of the Cooperative.

Further, Tri-County Electric Cooperative, Inc. shall not be liable therefor or for damages caused thereby due to failure or interruption of the supply of electrical energy through an act of God or of the public enemy, or because of accident, labor troubles, or any other cause beyond the control of the Cooperative. Also, the Cooperative shall not be liable therefor or for damages caused thereby due to curtailments or interruptions of service or other inability to supply power or energy occasioned by governmental regulation or by governmental limitation of the sale or use of electricity or fuel necessary to generate electricity, or for curtailments or interruptions due to governmental fuel allocations or other fuel unavailability not resulting from the negligence of the Cooperative.

The consumer shall notify the Cooperative promptly of any defect in service or of any trouble or irregularity in the electric supply.

Whenever service is interrupted for work on lines or equipment, such work shall be done, as far as practicable, at a time that will cause the least inconvenience to the consumer. The consumers to be affected by such interruptions shall, if practicable, be notified in advance.

However, failure of the Cooperative to notify the consumer in advance of the interruption shall not cause the Cooperative to be liable therefore or for any damage caused for failure to notify the consumer.

## **107 – STANDBY POWER**

No electric power sold by the Cooperative shall be used as reserve or standby service, or in any way in conjunction with any other service or power without the Cooperative's prior written consent.

## **108 – RESALE OF POWER**

Consumers shall not directly resell electric energy for any purpose. Consumers shall not divert electric energy to other premises or use it for purposes other than those permitted by the bylaws, rules and regulations of the Cooperative, and by State or local rules, laws and codes.

## **109 – OFFICE AND SERVICE HOURS**

The Cooperative maintains an office at St. Matthews, South Carolina. The office hours are as follows:

Monday through Thursday	8:00 a.m. until 5:00 p.m.
Friday	8:00 a.m. until 1:00 p.m.

The Cooperative maintains an office in lower Richland County, six miles from Eastover, South Carolina. The office is Drive through only and hours are as follows:

Monday and Wednesday	8:00 a.m. until 5:00 p.m.
Tuesday and Thursday	Closed
Friday	8:00 a.m. until 1:00 p.m.

The Cooperative maintains an office one mile east of Santee, South Carolina. The office is Drive through only and hours are as follows:

Monday and Wednesday	Closed
Tuesday and Thursday	8:00 a.m. until 5:00 p.m.
Friday	8:00 a.m. until 1:00 p.m.

Routine and regular service work is performed from 7:00 a.m. until 3:30 p.m., Monday through Friday. No routine or regular service work will be performed on Saturdays, Sundays, or Holidays. Service work for unusual conditions or circumstances may be arranged at other times upon request. Emergency service work is performed 24 hours a day, 7 days a week. Service personnel may be reached by calling the Cooperative's offices during regular office hours and during non-office hours by calling the following numbers shown under the Cooperative's listings in telephone directories:

1-803-874-1215  
1-877-874-1215

## **110 – PRIOR DEBTS**

The Cooperative shall not be required to furnish service to an applicant who, at the time of such application, is indebted to the Cooperative under an undisputed bill for service previously furnished applicant or furnished any other member of applicant's household or business until such indebtedness has been satisfied.

## **200 - SERVICE CONNECTIONS, MEMBER WIRING, MEMBER EQUIPMENT**

### **201 – SERVICE CONNECTIONS**

The Cooperative will furnish and install only one service drop to a metered point. The consumer must furnish a point of attachment for the Cooperative's service facilities which will meet the National Electric Safety Code and the Cooperative's requirements.

The point of attachment furnished by the consumer must be located at a point where the Cooperative's facilities can be constructed at a reasonable cost, and in accordance with sound engineering practices.

The Cooperative's responsibility for installation and/or maintenance of service facilities shall not extend beyond the point of attachment to the consumer's building, central distribution point, or the electric power consumption measuring device. When the consumer's metering requirements are of such nature that a central meter is to be erected, the Cooperative will require the consumer to establish the necessary pole or facilities for the attachment of the Cooperative's electric power consumption measuring device.

A consumer may have any number of service connections under one membership. Consumers desiring additional service connections, however, must file a written application for each such desired service connection on a form provided by the Cooperative.

When it is necessary to relocate the existing facilities of the Cooperative and the relocated Cooperative facilities are not convenient to the existing service facilities of the consumer, the Cooperative will pay for relocation of the consumer service facilities.

The Cooperative will only allow attachment to its poles or facilities under a contractual agreement prior to the installation by other companies (CATV, Telephone, ETV., etc.).

All service facilities and equipment constructed and installed by the Cooperative shall remain the sole property of the Cooperative and shall not become part of the property or premises to which said facilities are attached or on which said facilities are constructed.

### **202 – TEMPORARY SERVICE POLES**

Temporary poles for attachment of service wires and metering equipment shall be furnished by consumers, who have new buildings under construction, or who are reconstructing a building.

The temporary service pole shall be constructed in accordance with the National Electric Safety Code and applicable Cooperative specifications.

In addition to the normal meter socket, the temporary service pole should have a current protected service panel and necessary convenience outlets for use by the consumer.

The temporary service pole shall not be used by the consumer to serve the building after the building has been occupied, or the construction of the building has progressed to such a stage that the temporary service can be made permanent on the constructed building.

## **203 – GENERAL WIRING REQUIREMENTS**

Each consumer shall cause all premises receiving electric service pursuant to his/her membership to become and remain wired in accordance with the specifications and requirements of the Cooperative, the National Electric Safety Code, and any requirements of local government agencies having jurisdiction over the premises. All service entrance cable shall be exposed and in plain sight from the service head to the meter socket. Where this is not possible or desirable, enclosed service in rigid conduit will be permitted. A separate ground wire of sufficient size shall extend from the service head running parallel with the service cable and shall be connected to the ground rod.

In no event shall the responsibility of the Cooperative extend beyond the point at which its service wires are attached to the meter loop provided for measuring electricity used on such premises.

## **204 – MEMBER EQUIPMENT**

### Electric Motors:

The Cooperative should always be consulted on motor installations. The maximum permissible size depends upon the consumer's location on the distribution system and the capacity of the circuit.

It is the characteristic of most electric motors to draw a heavy momentary current when starting, resulting in many cases in variation in the voltage supplied to other members who receive service from the same circuits or transformers. It is, therefore, necessary that the Cooperative limit the amount of starting current which may be drawn by a motor.

All motors should be provided with devices that will protect the motor against overload or short circuit. All three-phase motors shall have overload devices to ensure proper protection for the motor. Motors that cannot be safely subjected to full voltage at starting should be provided with a device to ensure that on the failure of the supply voltage, the motor will be disconnected from the line.

The direction of phase rotation and the continuity of all three-phase current are guarded with great care, but the Cooperative cannot guarantee against accidental or temporary change of phase.

### Electric Generators:

Where auxiliary or breakdown service is installed by the consumer to provide emergency power, parallel operation of the consumer's generating equipment with the Cooperative's system will not be allowed. A double throw switch must be used to prevent possible injury to the Cooperative workmen by making it impossible for power to be fed back into the main line from the emergency generator.

### Electric Welders and Miscellaneous Devices:

Consumers desiring to operate electric welders or other devices with high inrush or fluctuating currents must supply the Cooperative with information regarding the electrical characteristics of the equipment. Service will not be allowed to equipment which adversely affects the Cooperative's equipment or the service to other members.

The Cooperative should be consulted before the purchase or installation of the equipment.

Consumer Responsibility:

All such protection equipment required shall be installed at the cost of the consumer.

**205 – POWER FACTOR CORRECTIONS**

The maintenance of high-power factor is of primary importance in the economic operation and maintenance of the distribution system.

Underloaded motors contribute largely to the creation of low power factor unfavorable to both the Cooperative and the consumer.

Where the overall power factor of the consumer's load is less than 90% lagging, the Cooperative may require the consumer to install, at his/her own expense, equipment to correct the power factor. The Cooperative reserves the right to measure the power factor at any time.

**206 – MULTI-PHASE SERVICE**

When multi-phase service is furnished, the consumer will at all times maintain a reasonable balance of load between the phases.

## **300 - RATE SCHEDULES**

### **301 – RATE SCHEDULES**

Rate schedules are now a separate document.

### **302 – REQUIRED TRANSFORMER CAPACITY**

The term “required transformer capacity” used in connection with determining the minimum bill under a rate schedule shall be taken to mean the capacity which is required to carry the member’s load, rather than the capacity installed. The Cooperative may find it convenient or advisable to install larger transformers than required. When two or more members are served from the same transformer, the minimum charge for each member shall be based on the transformer capacity which would normally be needed for his/her individual requirements.

## **400 - METERING**

### **401 – ELECTRIC METERS**

All meter sockets shall be installed on an exterior wall as nearly as possible at eye level, and in no case more than six (6) feet above finished grade level.

A central metering may be provided upon request if the consumer meets the requirements established by the Cooperative and erects a suitable pole or facilities for the distribution.

The consumer shall furnish and install suitable wiring within the meter enclosure or meter socket to permit the Cooperative to install the meter without any additional materials.

For large single-phase installations of over 200 amperes and for all three-phase installations, the Cooperative will specify the type of meter equipment required before installation.

All meters shall be placed ahead of all switches and fuses unless otherwise agreed to by the Cooperative in writing.

### **402 – METER READING**

All meters shall be read electronically or by Cooperative personnel monthly. Cooperative personnel must be able to always access all Cooperative equipment/meters.

### **403 – INCORRECT READING OF METER**

Corrections shall be made whenever meters are incorrectly read. The correct reading shall be ascertained whenever possible, and the bills will be recalculated as nearly as possible to reflect the correct usage.

### **404 – FAILURE OF METER TO REGISTER CORRECTLY**

If a meter fails to register correctly, the consumer will be billed on an estimated consumption which will be based on the previous use of the consumer. Consideration will be given to consumption on months immediately preceding consumption in similar periods of other years, comparative uses and sizes of connected loads, and other relevant facts.

If a meter is tested and found to have over-registered or under-registered by more than 2%, an adjustment will be made in the bill retroactively to the date the over or under registration began if such date can be determined, but not to exceed three months.

### **405 – METER TESTS**

The Cooperative, will, upon request, test the accuracy of a consumer's meter. If the meter has been tested within the last twelve (12) months, the consumer shall make a deposit (See Appendix A) to be applied against the cost of the test. If the meter upon testing, is found to be more than 2% (plus or minus) in error, deposit shall be refunded to the consumer and the consumer's bill will be adjusted as set forth in Section 404.

## **500 - BILLING**

### **501 – BILLING PERIOD AND PAYMENT OF BILLS**

All consumers shall be billed monthly.

Bills are due and payable upon receipt of the bill by the consumer. A late payment charge (See Appendix A) will be added on unpaid balances 15 days from the due date of bill. Service may be disconnected if payment is not received by 25 days from the due date of bill. Payment of electric bills may be made in person at any of the Cooperative's offices below, by mail to lockbox address on bill, by telephone call to the Cooperative, by Smart App or online through the Member portal on the Cooperative's website.

Tri-County Electric Cooperative, Inc.  
6473 Old State Road  
St. Matthews, S. C. 29135  
(Main Office)

Tri-County Electric Cooperative, Inc.  
11335 Garners Ferry Road  
Eastover, S. C. 29044  
(Richland District Office near Eastover, S. C.)

Tri-County Electric Cooperative, Inc.  
9348 Old #6 Highway  
Santee, S. C. 29142  
(Santee District Office on Hwy. 6 in Santee)

### **502 – ADJUSTMENT OF BILLS**

If it is determined that a bill has been prepared incorrectly or based on incorrect information, the bill shall be adjusted:

For incorrect meter reading, see Section 403.

For erroneous meter registration, see Section 404.

For shorts or grounds in consumer's wiring or equipment: Any KWH usage above normal (as determined by the Cooperative) shall be billed at the cost of wholesale power per KWH for a period not to exceed three months. Adjustments shall not be made for usage after a short or ground is discovered, and correction can be made.

### **503 – COLLECTING, DISCONNECT FOR FAILURE TO PAY AND RECONNECTION FEE**

Electric bills are due and payable upon receipt of the bill.

A late payment charge (See Appendix A) will be added to bills paid after 15 days from the due date of bill. Service may be disconnected if payment is not received by 25 days of the due date of bill. Disconnection of service on Advance Pay Accounts shall be administered under Section H of Policy No. 306.

The Cooperative cannot be responsible under any circumstances for electric bills or payments lost in the mail or otherwise.

A service charge (See Appendix A) will be charged for each disconnection and/or reconnection.

Anyone who calls during business hours for reconnection of service disconnected and requests to be connected after working hours will be reconnected for additional service charge (See Appendix A).

If any service is reconnected except during business hours, it will be at the discretion of the on-call supervisor.

Any new member who desires a connection of a service after normal working hours may request this service by paying a service charge (See Appendix A). This service will be rendered provided working schedules permit.

Checks may be accepted for payment of bills, but if any check is returned for non-payment for any reason, a returned check charge (See Appendix A) will be charged and service disconnected as hereinafter set forth. Furthermore, if any member-consumer has two (2) or more checks returned within any six months' period, the Cooperative reserves the right to refuse payments from him/her by check.

Pilfering of current in any manner will be subject to charges as set forth in Appendix A.

Advance Pay Accounts:

If an advance pay account falls into the negative, services may be terminated the next business day. Prior to reconnection, the member must pay a minimum electricity purchase fee (See Appendix A).

Advance Pay Account Debt Recovery:

If a member's account has a debt greater than their associated deposit, the account may be required to convert to the Advance Pay Billing system. 30% of the consumer's advanced payment will be used to pay the amount in arrears and 70% of the payment will be used for future energy cost.

## **504 – OTHER REASONS FOR DISCONNECTION**

Service will be disconnected immediately and without notice for the following reasons:

- Discovery of meter tampering
- Diversion of electric current
- Use of power for unlawful reasons
- Discovery of a condition determined by the Cooperative to be hazardous

Electric service will be reconnected in the above cases under the following conditions:

- Correcting of infraction plus an applicable pilfering charge with respect to above
- Payment of any unmetered current, if applicable
- Payment of reconnection fee

Member must agree to comply with reasonable requirements to protect the Cooperative against further

infractions.

Service may be disconnected, by and only after notice and reasonable time to comply with infraction has been allowed for the following reasons:

For violation of and/or non-compliance with any applicable State or other local laws, regulations and codes pertaining to electric service

For non-compliance with bylaws and rules and regulations of the Cooperative.

Electric service disconnected for the above reasons will be reconnected upon correction of infractions under same conditions as if consumer had requested disconnection.

## **505 – EXTENSION OF CREDIT**

The Cooperative may deviate from its policy on cutoffs for delinquent bills only in accordance with the following standards:

When it is determined that extension of credit for a fixed time, or arrangement for installment payments of the bill will not unduly impair the Cooperative's ability to effectuate final collection of the bill.

When the involved bill is a final bill covering service to a farm, home, or other residential account and the main building thereof has been destroyed by fire not caused by an act of arson on the part of the consumer or his/her family.

When to disconnect service might pose immediate danger to the consumer or other persons due to illness or when the household is immediately and directly affected by a death.

## **506 – DISCONNECTS FOR NON-PAYMENT DURING INCLEMENT WEATHER**

Cooperative management may waive, or delay disconnects for nonpayment due to severe or inclement weather conditions, emergencies, or operational difficulties. Normal disconnect procedures will be implemented as soon as possible, thereafter, but the delay will not normally exceed five (5) working days.

Inclement weather guidelines: (Based on the National Weather Service)

Extreme Cold – Temperatures are projected to fall below an average of 32 degrees Fahrenheit or less for the ensuing 48-hour period. *The temperature must be greater than 32 degrees before working disconnects.*

Extreme Heat – Temperatures are projected to reach 99 degrees Fahrenheit or higher for the ensuing 24-hour period or heat index to reach 105 degrees or higher for the ensuing 24-hour period.

This policy does not apply to hazardous situations, commercial disconnects or pilfering of current.

## **600 - EASEMENTS, RIGHT OF ACCESS AND COOPERATIVE PROPERTY**

### **601 – MEMBER TO GRANT EASEMENTS TO COOPERATIVE REQUIRED**

Each consumer shall, upon being requested to do so by the Cooperative, execute and deliver to the Cooperative grants of easements or right-of-way over, on and under such lands owned by the consumer, and in accordance with such reasonable terms and conditions as the Cooperative shall require for the furnishing of electric service to him/her or other consumers or for the construction, operation, maintenance, or relocation of the Cooperative's electric facilities.

### **602 – RIGHT OF ACCESS**

Cooperative's identified employees shall have the right of access to consumer's premises at all reasonable times for the purpose of reading meters, testing, repairing, removing, maintaining or exchanging any or all equipment and facilities which are the property of the Cooperative.

## **700 - MISCELLANEOUS**

### **701 – SCHEDULED OUTAGES**

Although the greater part of the Cooperative's line maintenance and repair work is done with lines energized, there exist requirements for outages due to some work on lines. Such work shall be done, as far as possible, at a time which will cause the least inconvenience to the consumers. The consumers to be affected by such interruptions shall, if practicable, be notified in advance.

### **702 – LINE AND FACILITIES RELOCATION**

In the event the existing location of the Cooperative's poles and/or lines seriously or unreasonably interfere with the use of the property on which they are located, the Cooperative may, upon request, reasonably relocate such facilities upon the property owner agreeing to and paying the actual cost of such relocation. Payment of the cost incurred in relocating the facilities must be paid before work begins.

### **703 – NO PREJUDICE OF RIGHTS**

The failure by the Cooperative to enforce any of the terms of these rules and regulations shall not be deemed as a waiver of the Cooperative's right to do so.

## **800 - WITHDRAWAL OF MEMBERSHIP**

### **801 – GENERAL CONDITIONS FOR MEMBER WITHDRAWAL**

A member may voluntarily withdraw from membership upon compliance with the generally applicable conditions set forth following:

Payment of all amounts due the Cooperative, and cessation of any non-compliance with his/her membership obligations, all as of the effective date of withdrawal; and either

Removal to other premises not furnished service by the Cooperative; or ceasing to use any central station electric service whatever at any of the premises to which such service has been furnished by the Cooperative pursuant to his/her membership.

Upon such withdrawal, the member shall be entitled to a refund of his membership fee and of any service security deposit then held by the Cooperative.

I AM THE OWNER, LESSEE, OR LICENSEE OF THE PROPERTY AND HAVE LAWFUL AUTHORITY TO PERMIT ENTRY UPON AND TO SAID PROPERTY, AND I HEREBY AGREE TO THE FOLLOWING PROVISIONS:

1. TCEC and/or its contractors will need access for work equipment and a clear route to begin the Work on facilities. Any obstacles such as fences, vehicles, landscaping, debris, etc. must be removed or relocated before Work begins.
2. While TCEC is responsible for locating publicly owned underground utility lines (telephone, catv, gas) through the National 811 (PUPS) system, I am solely responsible for identifying for TCEC and/or its contractors, the correct location of any underground objects, hazards, infrastructure, and vulnerable areas of the Property that: (1) might be damaged by said Work; or (2) would cause damage to the equipment of TCEC and/or its contractors during the Work. Underground objects include, but are not limited to: **septic tanks, drain lines, water lines, irrigation lines, and electrical lines not owned by TCEC**. Underground objects, hazards, infrastructure, and vulnerable areas of the Property should be exposed or clearly marked with paint, flags, or stakes.
3. I assume full responsibility and hold TCEC and/or its contractors harmless from any and all damage to aforementioned objects when it is caused by: (1) my failure to identify or mark an object; or (2) incorrectly identifying the location of an object.
4. TCEC and/or its contractors will perform the Work in a professional manner and use reasonable precaution to avoid or minimize damage to obvious above ground objects such as paved driveways, curbs, gutters, trees, shrubbery, crops, sidewalks, and buildings.
5. I am advised that damage **MAY** result from vehicles and equipment necessary to install, maintain, repair, and restore electric service to said Property.
6. TCEC and/or its contractors **WILL NOT** be held responsible for any damage that may result to concrete or asphalt driveways resulting from driving heavy vehicles and equipment across it when it is necessary for entry to the location of the Service. I assume full responsibility for any repair thereof. TCEC and/or its contractors **WILL NOT** be held responsible for any damage that may result to landscaping, trees, shrubbery, and other above ground objects as a result of Work required to provide service to said Property. **I assume full responsibility of any repair thereof.**
7. I understand that equipment tracks and ground disturbance **will result** from the use of equipment necessary for the Work and neither TCEC nor its contractors will be responsible for any repair thereof.
8. To meet the National Electric Safety Code, work site grading and landscaping must be at final grade before any electric service installation begins.

9. I understand that I may be responsible for additional costs incurred by TCEC due to TCEC's inability to perform the Work on schedule as a result of my failure to have the site ready or remain ready until all Work has been completed and I agree to pay such charges.
10. TCEC and/or its contractors **WILL NOT** be responsible for providing erosion control measures, re-seeding or re-sodding lawns, or replacing gravel in the area(s) disturbed due to said Work.
11. I understand that repairing, replacing, and installing underground service **requires** trenching or excavating. TCEC **WILL NOT** be held responsible for any damage that may result to landscaping, trees, shrubbery, and other above ground objects when work, such as trenching and excavating, is required to provide service to said Property. **I assume full responsibility for any repair thereof.**
12. TCEC and/or its contractors are responsible for backfilling all areas excavated at the completion of the Work. Areas may be backfilled above grade when possible. I acknowledge that I am solely responsible for backfilling any area(s) where Work was completed which have settled over time.
13. New rights-of-way will be cleared by TCEC, however, any and all cleanup and/or removal of all debris put on the ground will be the customer's sole responsibility. TCEC and/or its contractors **WILL NOT** provide cleanup and/or removal of tree debris by way of chipping, bush hogging, cutting, burning, or hauling.
14. I agree to be the single point of contact for TCEC. **I agree to be financially responsible to TCEC and/or its contractors for any damages or charges caused by myself or a contractor retained by me.**
15. **I acknowledge that I have been given the opportunity to consult with an attorney prior to signing this document and I hereby agree that the normal rule of construction to the effect that any ambiguities are to be resolved against the drafting party shall not be employed in the interpretation of this document.**
16. **Tri-County Electric Cooperative is NOT responsible for the cleanup of any debris. Member must take responsibility for this service.**

*Underground conductors and/or poles and equipment may be marked with paint and/or stakes. At your request, you may review your proposed installation with your area engineer before construction begins. We encourage members to discuss plans for installation with an area engineer before construction.*

I, (hereinafter "Applicant" or "Member"), hereby give Tri-County Electric Cooperative, Inc., (hereinafter "TCEC") permission to install, maintain, repair, and restore (hereinafter the "Work") above ground or underground electric service conductors and/or equipment at my home/business located at the property address specified above (hereinafter the "Property").
